A note on the citation of cartographic material

The referencing system we used for this report is the parenthetical author-date format, commonly known as the ‘Harvard system’. We include citations for many early maps in this format, despite the maps sometimes being undated, untitled, unpublished and/or of unclear authorship. We assume that the named surveyor and/or lithographer is the author(s) and that the date of the map sheet is the publication date, unless otherwise stated. Where no name is given, we refer to the source as ‘Anon map’. We avoid using the names of government departments to describe the citation, as they are generally long-defunct. When the map or source material is undated (or date illegible), we refer to the item as ‘undated’ in the text and reference, unless there is an approximate or apparent date of production (e.g. in marginal annotations), in which case we use the abbreviation ‘c.’ to refer to an approximate date of publication. Where the material is untitled, we provide a brief description of the map in square brackets. The abbreviated name of the public institution and the catalogue/call number of the map sheet or microfiche we viewed is also recorded, even though it may be only one of many holdings of the same item. Abbreviations are as follows: Public Records Office of Victoria: PROV; State Library of Victoria: SLV; National Library of Australia: NLA. The microfiche sets of the Public Records Office of Victoria are abbreviated as follows: Gippsland Rivers: GR; Coastal Surveys: CS; Special Surveys: SS; Sydney: S.
